Set of 5XL - \$675 - 1 XL 1x Large, 2x Med, 1x Sm.

BOOKS

MINERALIA: ROCK, MINERAL & FOSSIL PHOTOGRAPHY

By Jonathan Stone

An up close, visual macro-exploration of rocks, minerals and fossils from around the world evoking landscapes, other worlds and even the human condition in geological specimens unaltered from their natural forms. This book was designed as an object of fascination rather than a comprehensive tome, containing enough textual information on the featured mineral types and locations to encourage further research. The type of book that sparks an initial interest in a broader subject that can be explored for a lifetime. It is intended for all ages in the spirit of vintage coffee-table photo books, scaled down to a comfortable 8" x 8" in sturdy, square bound softcover.

25 full-page, detailed prints. Printed in the USA.

"I hope the book makes people look with more interest and detail at the world immediately around them, as well as at the geology of our planet; it is essentially integrated with every aspect of our lives, including the carbon cycle regulating our climate." - Jonathan Stone

Hardcover (Near image)

Lower luster photo paper.
